OBEX LT T110 UDTA

Dear Mr O'Reilly,

I can confirm that the terminal system referenced above has now been assessed as having undergone appropriate testing in accordance with prEN 1317-7:2014 in line with the assessment procedure contained in DN-REQ-03080 Terminal Assessment Procedure <https://www.tiipublications.ie/library/DN-REQ-03080-03.pdf>. The OBEX LT T100 UDTA Terminal will therefore be added to the Compliant Terminal Systems list, including the declared performance, which shall soon be accessible through <https://www.tiipublications.ie/downloads/>.

The OBEX LT T110 UDTA Terminal is approved for connection to the Aximum EVOL GS 2.0 N2 barrier to a maximum working width of W3.

As outlined in DN-REQ-03080, compliance with the requirements contained within the Standard and the subsequent inclusion of the OBEX LT T110 UDTA Terminal system on the TII Compliant Terminal Systems list shall not indemnify the supplier against any claims in law. It should also be noted that the above acceptance is subject to the terminals also meeting the required performance criteria as appropriate for each contract and appropriate transitions between the connecting barrier and terminal being provided. TII reserves the right to withdraw a system from the Compliant Terminal Systems list if there is evidence that the system performs in a different way from that shown in the Initial Type Test or for any other reason for which it sees fit.

Yours sincerely

Albert Daly
Head of Standards and Research
