

## **Series 1100: Kerbs, Footways and Paved Areas**

### **1 Steps**

The measurement of steps in this Series is intended for isolated steps and landings (e.g. steps to communication cabinets in cutting slopes). The Engineer should define on the Drawings the extent of the steps and landings at each individual location and each complete set of steps and landings is measured individually at each location. Steps and landings incorporated in a structure should be measured in accordance with the appropriate Series of the MMRW
