

Implementation of CC-SPW-04013 Mastic Asphalt in National Roads (October 2019)

CC-SPW-04013 Mastic Asphalt (CC-SPW-04013) was published in October 2019. This document is being issued as a TII Publication (Technical) document as an Interim Technical Advice for an interim period.

Mastic Asphalt is being used on the National Road Network for various applications but limited specifications for its use can only be found in TII publication CC-PAV-04007 (May 2019) Requirements for the Reinstatement of Openings in National Roads.

Mastic Asphalt being a type of bituminous material, the specifications associated to it should be covered under CC-SPW-00900 Specification for Road Works Series 900 – Road Pavements – Bituminous Materials.

CC-SPW-04013 covers the use of and specification of Mastic Asphalt in line with I.S. EN 13108-6 and S.R. 28. These specifications are first introduced under the format of an Interim Technical Advice (ITA) before being integrated into CC-SPW-00900 at a later stage.

All enquiries and comments in relation to CC-SPW-04013 can be sent by email via infopubs@tii.ie and will be considered in any revision to the document prior to integration into the TII Publications (Standards) documents listed above.
